SUMMARY

Junior Developer at BDO South Africa and Computer Science and Informatics graduate with experience building enterprise workflow applications, REST APIs and full-stack solutions using C#, ASP.NET Core, Laravel, React and TypeScript. Experienced in delivering internal business applications and independently developing a client engagement platform spanning backend services, databases and modern web interfaces. Seeking to further develop my technical skills, gain exposure to new technologies and grow as a developer.

EXPERIENCE

BDO South Africa — BDO Digital Advisory

– **Junior Developer (Fixed-Term Contract)** | *Oct 2026 – Present*

- Develop and maintain web and software applications, contributing to both frontend and backend functionality.
- Develop and test RESTful APIs and contribute to database design, SQL queries and data management.
- Contribute to workflow automation, technical documentation, software testing and cross-functional development initiatives.

– **Software Developer Intern** | *Oct 2025 – Sep 2026*

- Developed and enhanced business workflow applications using C#, ASP.NET Core, React and TypeScript, building REST APIs and user interfaces for assessments, surveys, reporting and administrative workflows.
- Independently developed a full-stack client engagement platform using Laravel, React, TypeScript, Inertia.js and MySQL, implementing client questionnaires, document management, progress tracking and automated email communications.
- Worked across monolithic and microservice architectures, integrating APIs, backend services and databases while performing functional testing, debugging and defect resolution.
- Used Git and Azure DevOps in development workflows, with exposure to Azure, Docker and Render for application deployment and environment management.

EDUCATION

- **Bachelor of Science in Information Technology in Computer Science and Informatics** / University of Johannesburg | 2021-2024
- **Matric |** Hoërskool Birchleigh, Kempton Park | 2020

SKILLS

- **Languages:** C#, TypeScript, JavaScript, PHP, Java, Python, SQL
- **Frameworks & Technologies:** ASP.NET Core, Laravel, React, Inertia.js, Node.js, Xamarin, .NET MAUI
- **Databases:** MySQL, SQL Server, PostgreSQL
- **APIs & Architecture:** REST APIs, Monolithic and Microservice Architectures, MVC, Role-Based Access Control
- **Tools & Deployment:** Git, GitHub, Azure DevOps, Azure, Docker, Render, Backblaze B2
- **Professional Skills:** Problem-Solving, Analytical Thinking, Adaptability, Team Collaboration, Task Prioritisation, Attention to Detail, Written and Verbal Communication.

PROJECTS

1. UJCivil

The University of Johannesburg Civil Society Club | Johannesburg, South Africa

🔗 **https://youtu.be/6G9XnhJ-6vA**

- Led the development of a comprehensive club management platform in a four-person team, working with a faculty mentor to deliver web and mobile applications for club operations and member engagement.
- Implemented membership registration and management, role-based access control, profile management, and membership payments through an online card payment gateway and in-person payment verification.
- Developed a task management and rewards system where managers assign tasks, verify completion and award points that members can redeem for prizes, merchandise and event tickets through a rewards marketplace.
- Built event management and booking features, including calendars, event galleries with image and video uploads, and location-based attendance verification using event-specific codes.
- Developed member dashboards with personalised event recommendations based on attendance history, alongside administrative reporting and analytics to track club activities.
- Extended core functionality to the Xamarin mobile app, supporting tasks, notifications, events, bookings and event galleries.

2. CodeBuddy (In Development)

🔗 **ReageNkoana/CodeBuddy: AI-Powered Desktop Voice Assistant**

- Built a desktop AI assistant with voice input, streamed AI responses, and text-to-speech, connecting a Tauri/React frontend to a Python FastAPI backend.
- Integrated speech recognition and AI APIs, developing voice interaction features to support more natural conversations, including speech interruption and voice selection.

3. FarmCare

🔗 **ReageNkoana/FarmCare-ComSci-Project**

- Developed a Java and JavaFX application to track livestock vaccinations using blockchain concepts.
- Implemented a custom client-server architecture using Java I/O streams.
- Improved data integrity using SHA-256 cryptographic hashing to help detect unauthorised changes to livestock records.
